

SYSTEM AND METHOD FOR PERFORMING A BUSINESS PROCESS
IN A MULTI-ENTERPRISE, COLLABORATING NETWORK

5 ABSTRACT OF THE DISCLOSURE

10 A system for performing a business process includes a
first version of a business application executed by a first
client to perform a particular business process and a
second version of the business application executed by a
15 second client to perform the business process, wherein the
first client is coupled to the second client using a
communication link. The first version of the business
application is identified using a first version identifier
and the second version of the business application is
20 identified using a second version identifier. One of the
first version of the business application and the second
version of the business application is selected to initiate
the business process based upon the first version
identifier and the second version identifier.
